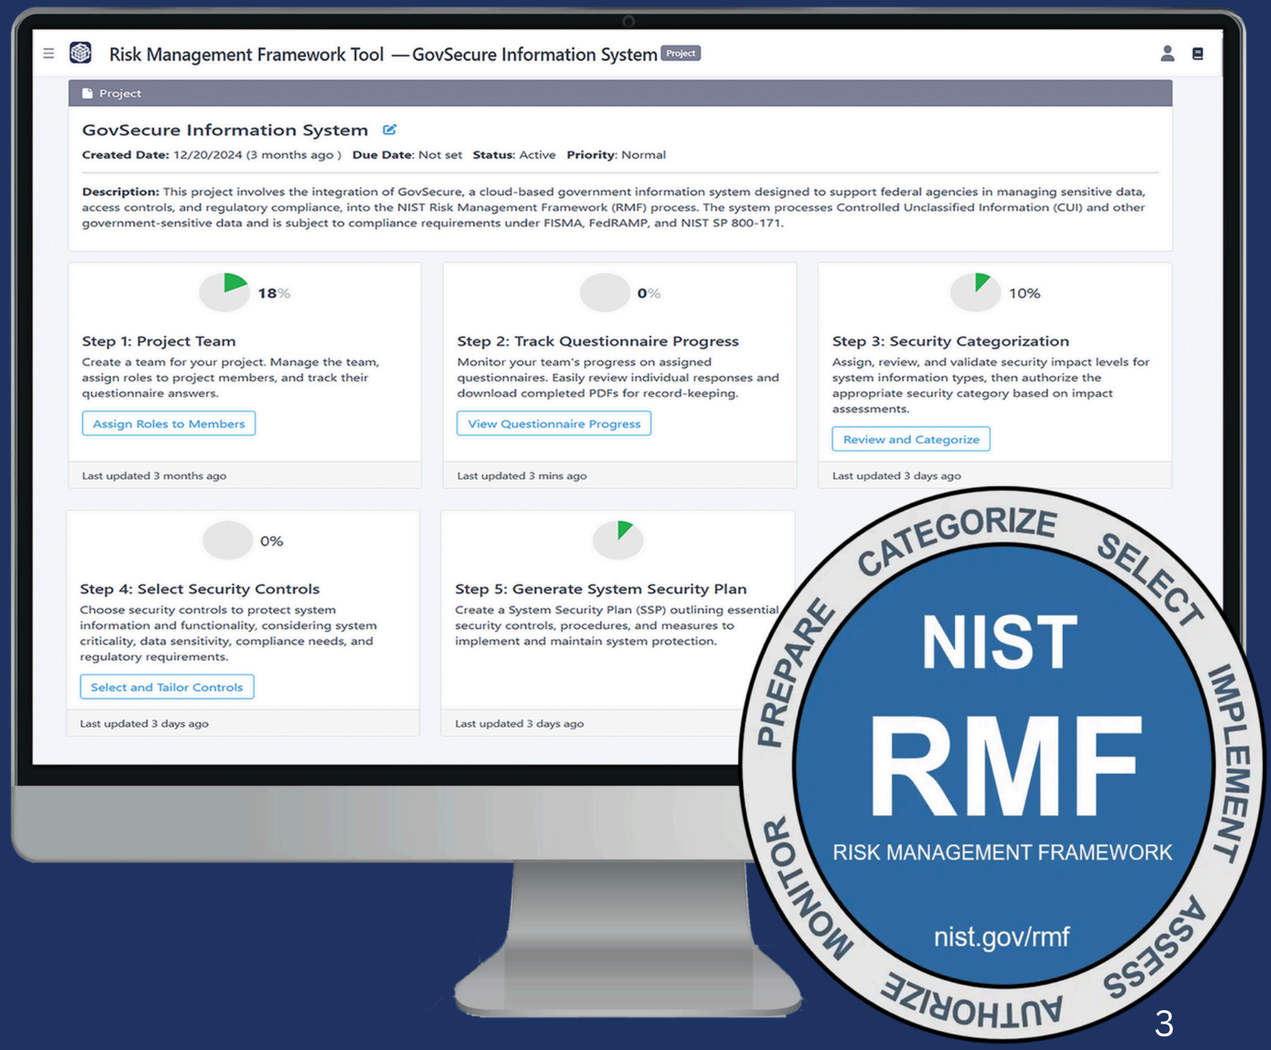
Challenges with Traditional RMF Compliance

- Manual document creation is time-consuming and error-prone.
- Fragmented pre-audit info makes early documentation difficult to prepare.
- Poor visibility across stakeholders and systems makes it difficult to coordinate tasks and track control ownership.
- Expensive, unguided tools lead to inconsistent control use and poor tailoring.
- Consultants must manage multiple systems across multiple client organizations without centralized tools.

The Solution: RMF Tool

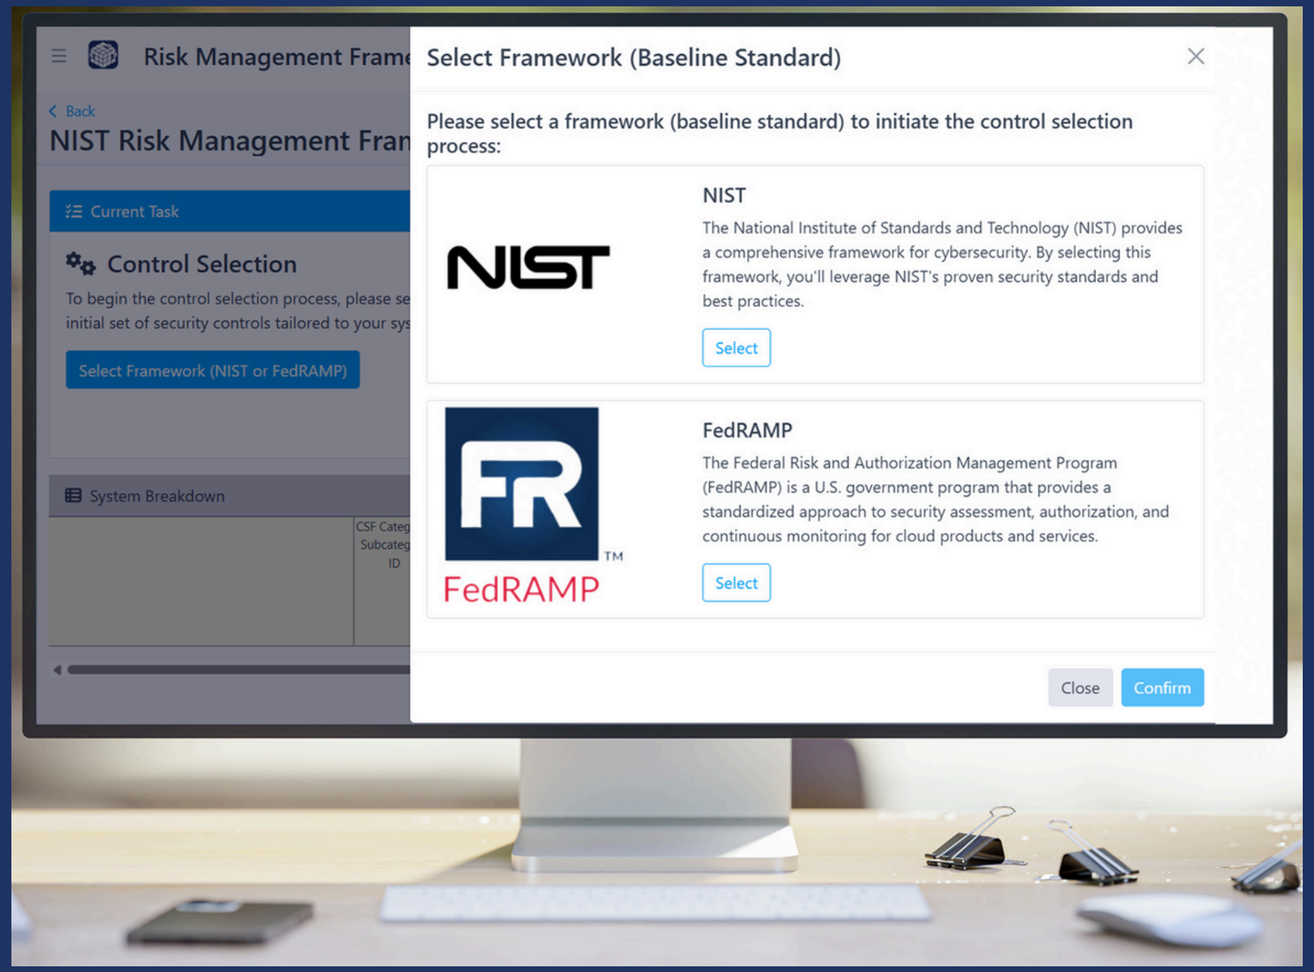
Modern RMF Automation

- Start with a guided questionnaire based on NIST and CSA EA to assess system functions and risks.
- Automatically map answers to information types and determine impact levels using FIPS 199.
- Select and tailor a control baseline using built-in logic, rationale fields, and parameter guidance.
- Define Target and Preliminary Current Profiles with visibility into implementation gaps and plans.
- Instantly generate SSP documentation in Word, Excel, and OSCAL formats.



Key Features

RMF Tool Highlights



- Streamlines risk assessments, control alignment, and documentation to reduce effort and improve accuracy.
- Interactive questionnaires optimize risk evaluation and control selection.
- Customize frameworks with pre-built RMF templates aligned to NIST, FedRAMP, and others.
- Tailor security and privacy controls based on system categorization and enhanced risk management.
- Create structured SSPs and profiles in Word, Excel, or OSCAL—aligned with your tailored controls to support FedRAMP, NIST RMF, HIPAA, and CMMC goals.

Export and Collaboration Options

Ready for Stakeholders and Submission

- Export SSPs in Word, Excel for internal reviews and collaboration.
- OSCAL exports for machine-readability and compliance automation.
- Track control rationales, tailoring, and implementation evidence.
- Share across teams, MSPs, or client orgs with traceable changes.

Who We Serve

Trusted by Public and Private Sector Teams

- State and Local Government Agencies and Government Contractors preparing for system assessment and audit.
- MSPs and Consultants managing RMF and other compliance needs across multiple clients.
- Healthcare and Finance orgs using CMMC or HIPAA to prepare controls and documentation pre-audit.
- Organizations applying RMF to align with FedRAMP or internal standards.
